

Launceston Airport Redevelopment

Australian Pacific Airport Launceston

\$11.9m

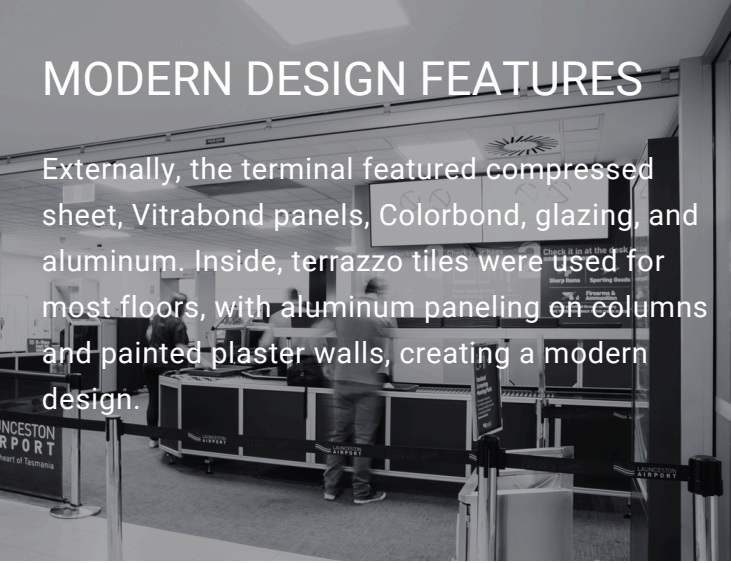

2009

THE PROJECT
SUCCEEDED DUE TO
THE TEAM'S QUICK,
INNOVATIVE
SOLUTIONS AND
STRONG
COLLABORATION.

The project involved a comprehensive refurbishment of the entire airport terminal, which included the construction of a new baggage screening facility, upgraded check-in area, expanded gate lounges, revamped arrivals area, and enhanced retail spaces. To minimise disruption to airport operations, the work was carefully planned and executed in four distinct stages, with each phase involving demolition followed by the installation of new infrastructure and finishes. This phased approach ensured the terminal could remain operational throughout the duration of the project.

MODERN DESIGN FEATURES

Externally, the terminal featured compressed sheet, Vitrabond panels, Colorbond, glazing, and aluminum. Inside, terrazzo tiles were used for most floors, with aluminum paneling on columns and painted plaster walls, creating a modern design.
